U-M Tech Transfer
IMPACT REPORT

It's my pleasure to share our report on the exciting impact of technology commercialization at the University of Michigan in 2018. Our innovators continue to inspire us, developing research discoveries that have the potential to change the world, save lives, enhance societal well-being, and drive economic growth.

Since joining the University of Michigan in early 2018, the Tech Transfer team and I have made significant progress in charting the future course for U-M's technology commercialization efforts. Working collaboratively with our internal and external stakeholders, we have completed a comprehensive review of our office's mission, vision, and values. And we have created a strategic plan that is an authentic and actionable expression of our vision, hope, and aspirations for technology commercialization at U-M.

We have worked together to augment our office's infrastructure, to enhance the services we provide to our U-M innovators, and to improve our relationships and connectivity with our region's entrepreneurial ecosystem. We are always striving to improve the service that we provide to our innovators, and to ensure we are leveraging every resource available to increase the impact of U-M research discoveries. If you are interested in working with us, please know that our door is always open.

We are inspired to redefine how world-class university research can fuel a region and solve the world's greatest challenges. We have a legacy worthy of celebration, and the best is yet to come.

KELLY B. SEXTON, PhD

Associate Vice President for Research,
Technology Transfer and Innovation Partnerships
University of Michigan

ON THE COVER:

U-M inventors **Mingyan Liu**, Peter and Evelyn Fuss Chair of Electrical and Computer Engineering, and **Anna Stefanopoulou**, Professor of Mechanical Engineering and William Clay Ford Professor of Manufacturing

PROFESSOR MINGYAN LIU
2018 Distinguished University
Innovator

For over a decade, **MINGYAN LIU** worked primarily on resource allocation problems in mobile, ad hoc, and wireless sensor networks. Her focus changed in 2013 when she assisted a colleague by devising approaches for modeling a set of Internet measurement data able to capture spam, phishing, and other malicious activities. Ultimately, by aggregating the malicious data along organizational boundaries, Liu and her team were able to determine the likelihood of a data breach with 90 percent accuracy. In 2014, they launched QuadMetrics, a start-up that offered services for gauging an organization's overall cybersecurity, provided companies with decision support tools for planning security budgets, and enabled cyber insurance providers to determine premium levels. Within 18 months, QuadMetrics was acquired by FICO, a California-based software analytics company that specializes in measuring consumer credit risk. Using the QuadMetrics core technology, the company has since gone on to launch an enterprise security score.

“As Chair of Electrical and Computer Engineering, my goal is to stress the importance and imperative of innovation, to build new collaborative opportunities with other U-M units, and to encourage students and faculty to take creative risks and adopt new and novel methods when searching for solutions. ECE is both broad and fundamental, a natural bridge into many other areas and disciplines. A lot of interesting things happen when people with different backgrounds are driven together by common objectives of social utility and impact.”

— MINGYAN LIU, PhD
Peter and Evelyn Fuss Chair of Electrical and Computer Engineering (ECE)
Principal Investigator, U-M Multidisciplinary Research Initiative Program (MURI)

Censys founders Brian Kelly and Alex Halderman

CENSYS

Leveling the Playing Field for Organizational Defenders

For decades, malicious actors have used illegal means to scan the Internet and pinpoint potential targets, driving up the annual global cost of cybercrime to \$2 trillion. Until recently, corporate security teams lacked global visibility to help them spot vulnerable areas and secure their assets. That changed in 2013, when U-M Computer Engineering professor **ALEX HALDERMAN** and **ZAKIR DURUMERIC** introduced ZMap, a free, open-source Internet scanning tool that enabled scientists and cybersecurity professionals to proactively identify vulnerable infrastructure and defend against potential threats. In 2017, the two teamed up with graduate student **DAVID ADRIAN** and entrepreneurs **BRIAN KELLY** and **DAVID CORCORAN** to launch Censys, a commercial version of their Internet security data service.

“Our goal is to level the playing field, to change the way security operates by making it more quantitative, more precise, and more accurate. With Censys, corporate security teams finally have the tools they need to make efficient connections among massive amounts of data and see what they have connected to the Internet. Armed with this information, they can locate potential security gaps, hunt for threats and malware, and proactively prevent phishing attacks and brand impersonation.”

— ALEX HALDERMAN
Professor, Computer Science and Engineering

PHENOMICS HEALTH, INC.

Increasing the Safety and Efficacy of Precision Medicine Through Next-Generation Clinical Decision Support Tools

For decades, pharmacogenomic researchers have pursued drug-gene testing as a way of reducing medication side effects. Despite advances, the tests have been limited in their predictive ability. In 2017, a U-M team led by **BRIAN D. ATHEY** (left) developed a breakthrough technique for determining how individual genes are impacted by specific drugs in combination with external factors such as ethnicity and environment. The result is a highly predictive profile of a patient's unique drug response. Working with Tech Transfer, Athey and biotechnology entrepreneur **JAMES S. BURNS** evaluated the potential applications of the software, and created a plan that would both see the technology protected and move the technology forward. The two launched Phenomics Health, Inc. in 2018. Validation studies for their patent-pending Pharmacophenomic Clinical Decision Support Platform will soon be underway.

“Every year, millions of people suffer inadequate outcomes or severe side effects from inappropriate medications. By providing an exhaustive analysis of gene networks and how their behaviors are regulated in response to specific drugs, our Clinical Treatment Drug Decision Support Platform can increase the precision of drug prescribing across multiple healthcare areas, disease categories, and medical disorders. Ultimately, this discovery has the potential to streamline patient care, avoid adverse events and drug reactions, and enable medical practitioners to deliver better healthcare.”

— **BRIAN ATHEY, PhD**

THIS YEAR, UNIVERSITY OF MICHIGAN RESEARCHERS DISCOVERED 484 WAYS TO MAKE THE WORLD BETTER

- Aerospace Engineering**
A Supervisory Model Predictive Controller for Diesel Engine Emissions Control
Active Aero Device to Attenuate Wind Thrust
ADFlow: A Computational Fluid Dynamics Solver
Autonomous Vehicle Failure Detection System
Flexible Stretchable Sensor
Nanoparticle Fiber Stings
pyAerostructure: A Solver for Coupled Aerodynamics and Structural Problems
pyOptSparse: A Common Python Wrapper for Numerical Optimization Software
Simulation Framework for a Complete and Predictive Electric Propulsion Model
Structured Shape Changing Polymers
- Anesthesiology**
Choking-Resistant Disinfecting Vascular Access Tubing Protector
Fixed Flowmeter for Tracheal Intubation
Tooth Specific Multi-Sensor Design to Assess Pulp Vitality
Video Cricothyroidotomy
- Architecture & Urban Planning**
Additive Manufacturing of Nonwoven Textiles
Kinaesthetic Interface for Engaged Learning and Social Interaction
Method for Mass-Customization and Multi-Axial Motion with a Knit-Constrained Actuator
Mobile Fabric Water Tower
Monolithic Thermocasting of Polymer Mixtures for Architectural Applications
Smartphone-Based Automated Ergonomic Risk Assessment
- Art & Design**
A Simple Tablettop Device to Assist Those with a Hand Tremor Often Associated with Parkinson's Disease
- Biologic and Materials Science**
Antibiotic Adjuvants for Biofilm Treatment
Cell Reprogramming
- Biological Chemistry**
Enhanced Expression Strains of E. coli Based on Chromosomal Insertion Locations
Methods for Quantifying Polyphosphate in Biological Systems
Hydrogel Catalysts for Low Temperature Ammonia Synthesis
Mice Deficient in Phosphorylation of Eukaryotic Translation Initiation Factor 2 Alpha
Polyphosphate and Polyphosphate Derivatives
Programmable RNA Cleavage and Recognition by a CRISPR-Cas9 System
- Biomedical Engineering**
A Supervisory Engineering Course Design
Method for Blunting the Immunosenescence of Innate Immune Cells Using Nanoparticles
Carbon Fiber in Silicone Nerve Interface Array
Cellular Reprogramming Using Nanoparticles
Fiber-Reinforced Hydrogel Composites for Modeling the Extracellular Matrix
Hydrogel Guidance Tubes for Aligned Tissue Regeneration
Injectable Drug in Colloidal Crystal Gels for Localized Antibiotic Therapy
Kidney Stone Proximity Sensor for Automated Trigger of Laser Lithotripsy
MEMS-Based Single Axis Confocal Endomicroscopy
Nanoparticle-Enabled Deformable Microparticles as a Two-Stage Delivery Vehicle for Vascular-Targeting of Therapeutics in Human Arteries
- Cardiac Surgery**
Cardiovascular Perfusion Registry
- Cell and Developmental Biology**
Second-Look Basic Radiology Mobile Application
Second-Look Dental Anesthesia Mobile Application
- Chemical Engineering**
Chromagnetic Optical Media and Light Modulation Using Chromagnetic Nanoparticles under Ambient Conditions
Anti-Counterfeiting Security Labels with Overt and Covert QR Code
Hexaarylbiimidazoles as Efficient Radical Polymerization Photoinitiators
High Activity Catalysts for Low Temperature Ammonia Synthesis
Hydrogel Materials as Rheometer Tooling for the Transient Delivery of Additives During Mechanical Rheometry
Improved Deazones for Continuous 3D Printing
Intersecting Multi-Color Irradiation Patterns for Ultra-Rapid 3D Printing
Microfluidic Valve for Irrigation Applications
Methods and Compositions for Improving Fire Retardant Properties of Coatings
Solvent-Based Regeneration Process for Beaded Activated Carbon
Thin Multi-Layer Cell Structures for High-Performance Thermophotovoltaics
Two-Step Continuous Production of Monodisperse Colloidal Ellipsoids
- Chemistry**
Compositions of Polyethylene Glycol as a Universal Nanocarrier for Photodynamic Therapy and Magnetic Resonance Imaging
Dendritic Metallochromes With Unique Optical Properties for Imaging Applications
Difluoromethylene Transfer Reagents
Electrochromic Concentration and Surface Capture of Dilute Analytes
Infusion of Nitric Oxide Donor Solutions to Enhance Performance of Insulin Infusion Cannula and Integrated Cannula-Sensor Devices
KCNQ Agonist Therapies with 1-Aminonorbornane-Based Scaffolds
Lipid Nanodisks: Formation by Amphiphilic Poly(methylmethacrylate) Copolymers
Metal-Organic Framework Materials
Method for Aromatic Fluorination 1
Method for Aromatic Fluorination 2
Mild Nucleophilic Aromatic Fluorination of Aryl Fluorosulfonates
Polymer Nanodisks Tolerant to pH and Metal Ions
Compositions of S-Nitrosothiol-Based Nitric Oxide Release Materials for Topical Applications
Succinate Dehydrogenase Inhibitors Containing 1-Aminonorbornanes
Second-Look Organic Chemistry I Mobile Application
Nucleophilic Aromatic Fluorination of Phenolic Derivatives
Tumor Inhibition Using Folate Binding Protein
- Civil and Environmental Engineering**
Carbon Dioxide Removal System for Heavy Duty Vehicle Exhaust
Deep SAFT: Scene Adaptive Feature Transformation
Electroimpedance Spectroscopy of Piezoelectric Actuated Osseointegrated Prostheses for Assessment of Healing and Damage in the Bone-Prosthesis System
Generalized Resolution Correlative Scan Matching: An Algorithm for Registering Point Clouds to Models, Maps, or Other Point Clouds
High Surface Area Biofilm Structure with Multiple-Pass Recirculation for Biological Treatment
Method for Non-Intrusive Determination of Human Comfort Using Low-Cost Thermographic Cameras
Monitoring Systems
Engineered Cementitious Composites for High Tensile Ductility and Photocatalytic Properties
Multistage Bioreactor with Fixed Biofilm Growth for Biological Treatment
Pipe Inspection Path Finding Using Heuristic Optimization
Production of Immune-Response-Stimulating Aerosols by Non-Thermal Plasma Treatment of Airborne Pathogens
Statistical Modeling of Drinking Water System Pipe Breaks in the Absence of System Data
Striated Steel Fibers
Urban Wireless Sensing Architecture for Smart City Sensor Networks
Vehicle-to-Vehicle Power Transfer: Unleashing a Sharing Economy for Electric Vehicle Charging to Boost Efficiency and Slash Costs
- Climate and Space Science**
Method for Energy and Matter Delivery
Probability Distribution Function Model to Predict Solar Wind Speed
Spacecraft Orbital Characterization Kit
- Computational Medicine and Bioinformatics**
A Method to Determine the Effect Size of Epigenome Regulatory Variation and Predict Novel Drug Targets and Configure Pharmacogenomic Diagnostics
Abdominopelvic and Chest Bone Segmentation in Axial CT Volumes
Automated Method to Calculate the Optic Nerve Sheath Diameter
Automatic Filter Pruning Technique for Convolutional Neural Networks
Cardiac Event Prediction System
Computational Framework Utilizing Coalition Game Theory for False Alarm Reduction
Kinetic Segmentation for Traumatic Abdominopelvic Injury
Liver Segmentation via Probabilistic Atlas
Localization of the Abdominal Cavity in Axial CT Images
Method and Apparatus for Analysis of Chromatin Interaction Data
Machine Shift Detection in Traumatic Brain Injury
Roulette Transform for Signal Processing
Segmentation of Hematoma in Acute Traumatic Brain Injury
Segmentation of Subdural Hematoma
Spleen Segmentation in Axial CT Volumes via 3D Active Contours
- C.W. Mott Administration**
Woodson App
- Dermatology**
Animal Models for Autoimmune Diseases
Disposable Modular Bandage System
Fibroblast Culture Model of Dysregulated Collagen Homeostasis in Aged Human Skin: Identification of Natural Composites with Restorative Activity
Patch-Based Drug Delivery for Treatment of Basal Cell Carcinoma
- Electrical Engineering and Computer Science**
A Hand-Held, Directional, Multi-Frequency Probe for Spinal Needle Placement
A Method for Randomized Load Balancing
A Side Channel Attack Immune Secure Measurement Unit
A Workflow and Method for Collective Curation of Conversational Context
Adjusting Donor-Acceptor Group Distances to Reduce the Energy Loss in Organic Solar Cells
Automated Software Bugs Localization
Automatic Speech-Based Longitudinal Emotion and Mood Recognition for Mental Health Monitoring and Treatment
Autonomous Radar Scene Simulator
Automated Detection of Web Security Defects
Brushless, Self-Excited Synchronous Field-Winding Machine
Compact and Low Cost Integrated Solid State On-Chip LIDAR System for Mobility Applications
Composite Electrode Structure Providing Global and Local Conductivity and Devices Made Thereof
Current Collector Clad with Li-Ion Solid Electrolyte
DeFINN: Addressing Bottlenecks for DNN Execution on GPUs via Synapse Vector Elimination and Near-Compute Data Fission
Method of Detecting and Disclosing Near-Field Occlusions Detected by Cameras and Sensors
Digital Stability Test for Total Hip Arthroplasty: New Concept for Next Generation of Computer Assisted Surgery
Displaced and Dilated Address Space
Distributed Amplifier Architecture
Dynamic Interactive Software Refactoring
Dynamic Watermarking Using Seeded Randomized Pixel Values to Embed GPS Data
Dynamic Watermarking Using Seeded Randomized Pixels to Embed Time Stamp and Date Values with Verification and Validation for Camera Based Sensors
Efficient P-Type Conduction of AIGaN
Electromechanically Actuated Phase Shifter at Sub-Terahertz Frequencies
Encapsulation Approaches for Magnetoelastic Resonators in Intraluminal Prosthesis Monitoring Systems
Ensembles of Moving Target Defenses
Environmental Emotion Sensing
ESGM Stereo Vision
GenAc: A Genome Sequencing Accelerator
General-Purpose Compute-SRAM for In-Memory Compute Applications
High Efficiency Micro-Architecture for Mixing Latency Critical and Throughput Applications in the Presence Long Latency
High Efficiency Tandem Organic Solar Cell Combining Vacuum-Deposited Front Cell and Solution-Processed Non-Fullerene Back Cell
High Efficiency Tandem Solar Cells Based on Ternary Sub-Cells
Highly Efficient Organic Anorectal Exposed Device
Highly Reliable Stacked White Organic Light Emitting Device
Improving End-Of-Turn Detection in Spoken Dialogues by Detecting Speaker Intentions
Improving Vehicle-to-Infrastructure Network Performance via Redundant, Multipath Transmission
Integrated On-Board Data Collection
- Emergency Medicine**
Cousteau - Cohort Discovery Tool
Emergency Critical Care Center

Photolytic Generation of Nitric Oxide from Solid Phase Nitric Oxide Donor into Gas Phase for Inhalation Therapy
- Pharmacology**
Analogs of 12-LOX Inhibitor ML355 for Protection from Heparin-Induced Thrombocytopenia and Thrombosis
DHA-Aspirin Conjugate for Treatment of Cardiovascular Pathology
Analogs of 12-LOX Inhibitor ML355 for Protection from Heparin-Induced Thrombocytopenia and Thrombosis
Stereoselective Synthesis of Mixed Disulfide Conjugate of Thienopyridine Compounds
- Pharmacy**
Aqueous Solution of Polymers
Polysaccharide-Based Structures for Applications in Vaccine and Immunotherapy
- Physical Medicine and Rehabilitation**
Semi-Passive Rehabilitation Robot for Functional Resistance Training of the Upper-Extremity
Huntington Disease Quality of Life Measurement System
- Physical Therapy**
Method and Device to Improve Women's Injury Awareness
- Physics**
A Device for Moving Drops Using Photoelectrowetting
Asymmetric Quantum Wells for Frequency Comb Generation in Diode Lasers
Atom-Based Electromagnetic Radiation Electric Field and Power Sensor
Path-Fluctuation Monitor for Frequency-Modulated Interferometer
Problem Roulette Assessment Preparation Service
- Plastic Surgery**
CD47 Activating Peptide to Inhibit Traumatic and Genetic Heterotopic Ossification
Ex-Vivo Device to Prepare Full-Thickness Skin Grafts
Online Toolkit For Opoid Safety and Intervention
TGFB Ligand Trap

Acp4 Gene Edited Mouse Model
- Psychology**
Constructing and Navigating Knowledge Space
Employability Skills Assessment
Neuropia: A Cloud-Based, Fully Customizable, Immersive Education Engine for the Brain Sciences
- Radiation Oncology**
A Transcription-Based Algorithm to Predict Therapy Response in Glioblastoma
Combined Radiation Acoustics and Ultrasound for Radiotherapy Guidance and Cancer Targeting
Genomic Signatures to Predict Responsiveness of Patients with Prostate Cancer to Post-Operative Radiation Therapy
Targeting Chromosomal Rearrangements in Cancer
Targeting the Androgen Receptor in Combination with RT for Brain Tumors
- Radiology**
A Simple Method to Measure Magnetic Resonance Anisotropic T2 Relaxation Times in Human Knee Cartilage
Absolute Temperature Measurement Using Magnetic Susceptibility MRI
Assessment of Spatial Jacobian for Quantification of Aortic Aneurysm Enlargement
Dual HeR and Lipid Kinase Family Inhibitors for the Treatment of Cancer of the Brain
Electromagnetic Coupling Catheter
Insulation Balloon Catheter
Low Profile Collapsible Balloon-Expandable Thermal Ablation Catheter
Nanostructure Platforms for Quantitative MRI Validation
POSS: Nanocomposite Hydrogel for 3D Bioprinting
Pre-Shaped Occlusion Balloon Catheter
Protective Sleeve for Catheter Removal During Radioembolization
Regional Histogram-Based Analysis of Spatially Aligned Medical Images
Synthesis of an Image-Able Labeled Cholesterol
Three-Dimensional Snare
Ultrasound Speckle Decorrelation Estimation of Lung Motion and Ventilation
- Research on Women & Gender**
College Student Life Survey
The ABCs of Home Drug Safety
- School of Public Health – Dean's Office**
Grant Sprints
- School of Information**
Augmented Reality Prototyping Tool
- Student Inventors**
Modified Phone Wallet
